

Meet Claude-Mem! ✨

**Your AI's friendly note-taker.
From zero to 'It Remembers!' in 15 minutes.**

No prior knowledge needed.

How it works: A buddy system! 🤝

Before we touch anything, here is the secret: Claude-Mem is simply a **second agent** that watches your first agent and takes notes.

Stage 1: Let's get set up! 🎒

Do this

```
npx claude-mem  
install
```

You'll see

Meme unpacks a tiny background service and checks that its little helpers are ready to go.

What it means

I'm in the room! You haven't changed how your main AI works; you just invited a friend to watch.

Stage 2: Just act normal! 🛠️

Do this

Do a few real things.
Fix a bug, ask a question,
read a file.

You'll see

Nothing different!
Your AI acts exactly as
it always does.

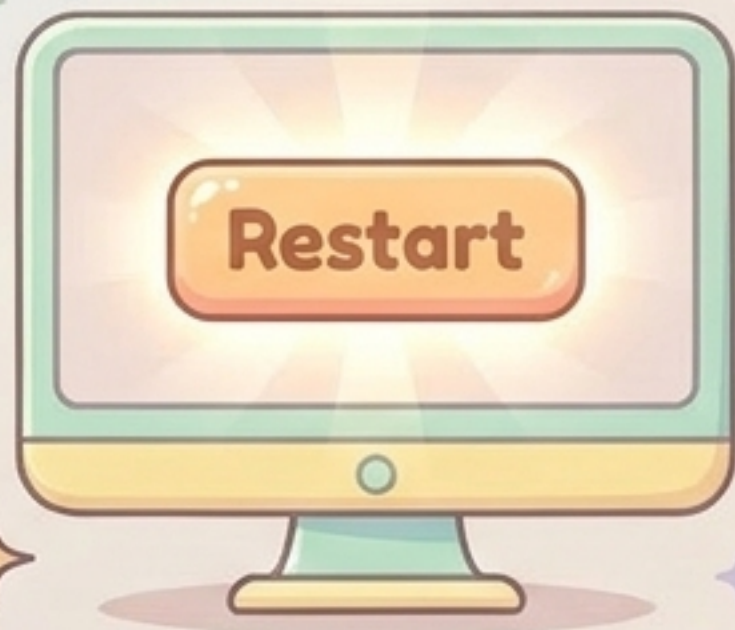

What it means

For every action, I ask "Is this worth a note?" If yes, I save the story, the tags, and the files involved. (Keep the local viewer open to watch me work live!)

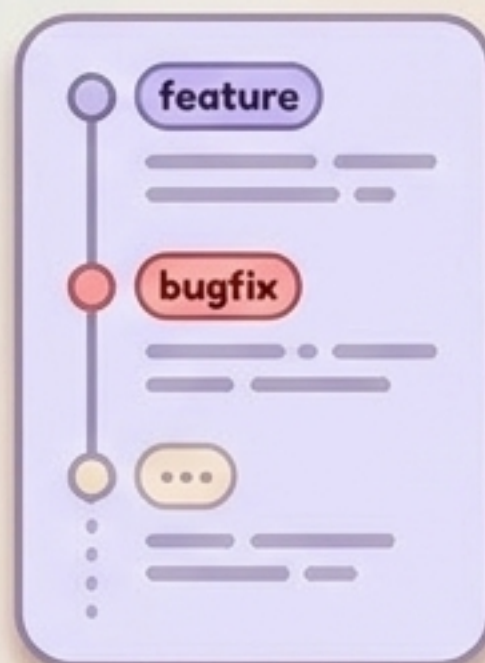

Stage 3: The Warm Boot

Do this

End the session, then start a new session in the same project. Ask: "What did we do last time?"

You'll see

A compact timeline appears at the top before you even type!

What it means

Redoing the work
(1,324,849 tokens)

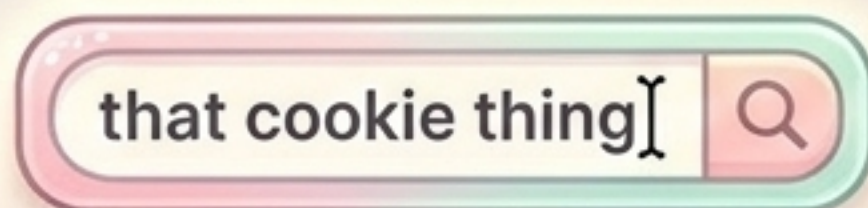

Reading the timeline
(50 notes)

99% cheaper to read!
Your AI remembers everything for 1% of the cost.

Stage 4: Digging into the Archives 🔍

Do this

Ask a "did we already..." question. Try searching for a concept.

You'll see

Skim titles → Check the timeline → Read only the note it needs.

What it means

We never dump the whole notebook on the desk! Titles first, details on demand. That keeps memory fast and cheap forever.

Stage 5: Change the Job Description ✨

Do this

```
/mode-creator
```

You'll see

A friendly interview! It asks what you want to watch next (Code? Whiteboards? Meetings?) and sets up a new configuration mode.

What it means

I don't just watch code. You can change my job description to watch anything.

Anything you can read, Memi can remember! 📷🗣️💬

Swap the mode, and the same machinery observes something completely different. Any data in, any pattern out.

Tagging Decisions
& Owners

Tagging Action Items
& Deadlines

Tagging Entities
& Anomalies

You did it! Level Complete! 🎉

- ✓ **Install:** A note-taker joins the room.
- ✓ **Work:** Every action becomes structured notes.
- ✓ **Warm Boot:** The timeline comes back, saving you 99%.
- ✓ **Search:** Ask "Did we already..."
- ✓ **Mode-Creator:** Watch photos, transcripts, anything!
